Allowable Subject Matter

1. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 1-11, no prior art of reference or combination thereof teaches a system for reducing the temperature of a coolant flowing through a power transformer cooling system, the system comprising a “first forced air heat exchanger connected to the transformer cooling system, a second liquid-to-liquid heat exchanger connected to the transformer cooling system, and a source of chillate connected to said second heat exchanger to provide chillate thereto for withdrawing heat from the coolant flowing through the second heat exchanger”.

Regarding claims 12-20, no prior art of reference or combination thereof teaches a system for reducing the temperature of a coolant flowing through a power transformer cooling system, the system comprising “a liquid-to-liquid heat exchanger connected to the transformer cooling system, the heat exchanger having a coolant inlet for receiving coolant at an elevated temperature from the cooling system, a coolant outlet for discharging coolant to the cooling system at a relatively lower temperature, a chillate inlet for receiving a liquid chillate, and a chillate outlet for discharging the chillate from the heat exchanger after absorbing heat energy from the coolant, and a source of liquid chillate connected to said heat exchanger to provide chillate thereto at a reduced temperature less than the relatively lower temperature”.

Regarding claims 21-26, no prior art of reference or combination thereof teaches a method for reducing the temperature of a coolant flowing through a transformer cooling system; the method comprising the steps of “(1) passing the coolant through a liquid-to-liquid heat exchanger to reduce the temperature of the coolant (2) passing a chillate through the heat exchanger to extract heat energy from the coolant; and (3) cooling the chillate using an absorption chiller driven by a heat energy storage component”.
